

Crystal Bevans

As a Nuclear Medicine technologist for the past 17 years, I have had the privilege of watching the MRT profession grow and expand its influence. Our ever changing technology keeps us on the forefront of modern medicine and we are blessed being able to assist so many different patient populations.

I started at the Georges L. Dumont Hospital and then moved down the street to the Moncton City Hospital, first as a technologist and then as the supervisor of the department. I started volunteering with the NBAMRT on the complaints committee, and more recently became the NB Director-at-Large for the CAMRT and now the NBAMRT.

I am excited to learn about the inner workings of our Association and network with other professionals committed to providing the best care for our patients.
